airflow required for sup

Made in Germany to the highest standards, SEBO cylinder vacuum cleaners incorporate advanced, innovative features which are designed to make them as user friendly as possible and give the optimum in cleaning performance. It is in use that their true quality shows.

air belt C2 TOTAL

Features

- 1500W high performance motor
- S-CLASS filtration
- Heavy duty combination nozzle
- Long crevice nozzle, upholstery nozzle and dusting brush
- Chrome telescopic tube
- Activated charcoal odour filtration
- Floor Turbo Brush, suitable for hard floors and carpets
- Five year parts guarantee*

Benefits

- Odour filtration for problems with smell e.g. from pets
- Floor Turbo Brush lifts pile, is effortless to use and is effective for fibres and hair e.g. from pets

**Some parts excluded*

mance.

nes the pure air of S-CLASS erior cleaning performance.

S-CLASS filtration

is standard

The exhaust microfilter is interchangeable with the combined micro/activated charcoal filter.

The hygienic disposal of retained dirt was also an important factor in gaining the British Allergy Foundation "Seal of Approval"

For high air flow and high filtration a large surface area of filter is required. The SEBO C2 Total has two microfilters. ① A hospital grade pre-motor microfilter (which also protects the motor from dust) and ② an exhaust microfilter, so that the air emitted by the machine conforms to the S-CLASS standard (99.97% @ 0.3 micron). For particles of 1 micron and larger the filtration rate is 100%. A major benefit of this design is that performance

loss due to filter clogging, which can afflict high filtration cylinders, is avoided.

The exhaust microfilter is interchangeable with the combined micro/activated charcoal filter.

To prevent release and exposure to dust when emptying, SEBO have patented a sealable 3-layer bag. Because the bag comes away with the cover, you can take it to the bin without handling it, and when sealed no dust will escape.

filtration with the powerful

Anti-Allergy...

... and protects your home

The British Allergy Foundation found that these vacuum cleaners produced ZERO levels of detectable airborne allergens

The air belt also protects furniture from knocks

When tested by the British Allergy Foundation using dust mite and cat allergens, these vacuum cleaners were found to pick up virtually 100% of allergens, to retain 100% and to filter out 100% of detectable allergens. They can help prevent conditions such as asthma, rhinitis, hayfever and eczema.

For more information on allergies contact the British Allergy Foundation on 0181 303 8525.

Conventional designs of cylinder have a concentrated exhaust blast which can throw up dust and allergens – causing a potential hazard for allergy sufferers, as well as disturbing paper and plants etc.

The SEBO *air belt* is different. Air is exhausted from around the whole machine, through the *air belt*. The effect is to diffuse the exhaust and eliminate air blast. It also makes it extremely quiet.

The *air belt* also gives the best possible protection to walls and furniture. Made of a tough lycra-mix material covering a high density foam bumper, instead of leaving marks and scratches, the *air belt* absorbs potentially damaging impacts.

SEBO understand that you clean your home because you care for it.

Intelligent design

Convenient parking slots keep your tube tidy when standing or in horizontal position

To SEBO, design isn't a matter of gimmicks, it's about the optimum function of each part and the performance of the whole. We strive to create machines that work well with people. For example, the plug emerges at the top of the machine so it is easy to reach. The instruction manual is fitted into the attachment cover so that it won't be lost, and the

power control roller can be operated with the foot to save bending.

New innovative foot controls - minimise back-bending

Quality attachments...

Quality results

Combination Nozzle¹

A stainless steel sole plate gives durability, the rear roller and design of the suction channels makes it easy to push and it has a flip down brush for hard floors. The double jointed neck makes it highly manoeuvrable.

Floor Turbo Brush¹

The air driven rotating brush lifts the pile, removes hair and fibres and is suitable for carpets and hard floors. It's also very easy to push.

Features removable access cover for easy maintenance

Stair & Upholstery Turbo Brush²

An air driven rotating brush that can clean small or awkward areas and can be opened for easy maintenance. Your stairs will never have been so clean.

1 Standard with C2 Total

2 Optional extra

Easy to handle...

*Ergonomic design
makes SEBO
machines easy
to handle*

Vacuum cleaning doesn't have to be a back breaking chore. A specially designed handle grip enables you to comfortably operate the floor nozzle (or tools). The Floor Turbo Brush (standard with the C2 TOTAL) effortlessly lifts the pile and will go straight from carpet to hard floor without adjustment.

A telescopic tube means you can find the perfect height setting to suit you.

*Obstacles are
no problem with
four carefully shaped
swivel castors*

The four castors are wide so that they won't sink into deep pile, they are soft coated for hard floors and have sloping front profiles to ride over obstacles. All four castors swivel giving tremendous manoeuvrability.

*The telescopic tube
offers a variety
of heights*
